João de Teixeira da Encarnação

Postdoctoral Fellow, Center for Space Research, University of Texas at Austin

Personal Information

Full Name:	João Gregório de Teixeira da Encarnação
Birth:	25^{th} of February 1977 at Funchal, Portugal
Nationality:	Portuguese
Address:	3925 W Braker Lane Ste 200 - WPR 2.9076 Austin TX 78759-5316, USA
Telephone:	+1 (512) 232-6897
Email:	teixeira@csr.utexas.edu
Web:	University of Texas, LinkedIn, ResearchGate, Google Scholar, ORCID, Mendeley, SCOPUS, Publons, GitHub

Education

2015 **PhD in Space Geodesy**
Geoscience and Remote Sensing (GRS), Delft University of Technology (TU Delft)
Dissertation: *Next-generation satellite gravimetry for measuring mass transport in the Earth system*
Promotor: Prof. Dr-Ing. habil. Roland Klees
Supervisor: Dr. Ir. Pavel Ditmar

2004 **Master of Sciences in Aerospace Engineering**
Astrodynamics and Space missions (AS), TU Delft
Final Thesis: *Numerical Simulation of Launch Vehicles*
Supervisor: Prof. Ir. B.A.C. Ambrosius

2000 **Licenciatura (Licenciate) in Aerospace Engineering**
Instituto Superior Técnico (IST), Technical University of Lisbon (UTL)
5^{th} year concluded at TU Delft, through the ERASMUS program
Report: *Optimum Aerodynamic Shape for a High Altitude Long Endurance Aerostatic Platform*
Supervisor: Prof. Dr. Ir. Theo van Holten

Academic and Research Experience

Aug. 2016 – present

Research Associate at Center for Space Research (CSR), University of Texas at Austin (UTexas), USA:

- Improvements in the calibration of the accelerometers on-board the Gravity Recovery And Climate Experiment (GRACE) satellites, in particular in what relates to temperature effects;
- Determination of the (non-linear) long-term trends in the GRACE gravity field solutions and their prediction during the GRACE/GRACE Follow On (GRACE-FO) gap;
- Time-varying gravity fields estimated from Kinematic Orbits;
- In-house software development in Matlab and Ruby.

Sep. 2011 – Jul. 2016

Research Associate at AS, TU Delft, the Netherlands:

- Calibration of the accelerometers on-board the Swarm satellites;
- Improvements in the modelling of non-conservative forces acting on satellites;
- Exploiting Digital Signal Processing (DSP) techniques to merge the measurement of non-gravitational accelerations from different sources: Global Positioning System (GPS)-driven and accelerometer observations;
- Time-varying gravity fields estimated from Kinematic Orbits;
- Research project: Assessment of Satellite Constellations for Monitoring the Variations in Earth's Gravity Field;
- Research project: GOCE+ Theme3: Air density and wind retrieval using Gravity field and steady-state Ocean Circulation Explorer (GOCE) data;
- Research project: Development of the Swarm Level 2 Algorithms and Associated Level 2 Processing Facility;
- In-house software development in Fortran, Matlab and Ruby;
- Student supervision and mentoring.

Jan. 2007 – Dec. 2015 **PhD Candidate** at GRS, TU Delft, the Netherlands:

- Simulation of future gravimetric satellite missions and noise budget of low-low satellite-to-satellite tracking gravimetric data;
- Impact of orbit position modelling errors in the quality of satellite gravimetric data;
- Retrieval of the high-frequency time-variable gravity field of the Earth with numerous satellites;
- Research project: Assessment of a Next Generation Gravity Mission for Monitoring the Variations of Earth's Gravity Field;
- Research project: Monitoring and Modelling Individual Sources of Mass Distribution and Transport in the Earth System by Means of Satellites;
- In-house software development in Fortran and Matlab;
- Student supervision and mentoring.

Apr. 2005 – Nov. 2006 **Stress Engineer** at Global Technics, Leiden, the Netherlands:

- Automated design (for weight and stress minimization) of fuselage panels for the Airbus A380 aircraft (in-house implementation of a tool in C++);
- Trainees supervision and mentoring.

Oct. 2004 – Jan. 2005 **Aerospace Engineer** at Delta-Utec, Leiden, the Netherlands:

- Contractor Work: Implementation of a Sub-Orbital Optimization Module into the Simulation Tool *COLVET* (developed in-house at TU Delft).

Mar. 2004 – Apr. 2004 **Trainee** at the Prins Maurits Laboratorium, TNO, the Netherlands
Supervisor: Ir. Berry Sanders, Rocket Technology Research Group:

- Implementation of the Launch Vehicle Simulation and Optimisation Tool *COLVET*;
- Numerical Simulations on Laser Propulsion (appendix of MSc thesis);
- Collaboration with international colleagues (PT and NL) on a European Space Agency (ESA)-funded project to determine the feasibility of Laser Propulsion.

Sep. 2001 – Dec. 2001 **Trainee** at European Space Research and Technology Centre (ESTEC), ESA, Noordwijk, the Netherlands
Supervisor: Prof. Wubbo Ockels:

- Collaboration with fellow MSc colleagues on a space mission design project: *Lunar Exploration with Ariane 5*;
- Simulation of rocket ascent trajectories (implemented a 2D orbit integrator in Matlab);
- Optimization or rocket trajectories, thrust and attitude program, fuel consumption and payload;
- Preliminary lunar mission design.

Teaching Experience

At TU Delft, I was required to supervise student projects of a practical nature, every year. This means that I had to direct the work of a small group of students (7 to 9) to a particular objective. It is an activity I enjoy doing and I see the students are enthusiastic about. I always ask them to fill (anonymously) a short list of questions regarding their opinion of the project and my ability as instructor (these answer sheets are available if requested). I always get encouraging and positive feedback.

My senior colleagues always grade my teaching activities as very good to excellent and I am often asked by students to support their application with recommendation letters.

In what concerns teaching large groups of students, I have given lectures to classes of about 30 students, on exceptional occasions, at the request of colleagues.

Additionally, I was a lecturer at the 2017 Summer School On Data Assimilation And Its Applications In Oceanography, Hydrology, Risk & Safety And Reservoir Engineering (cf. data-assimilation.com).

I value all teaching my experiences because they were extremely rewarding.

Skills

Communication: Numerous presentations of research results (8 oral and 4 poster)

Teaching:

- Student supervision in the context of individual and group assignments
- Introductory lectures to the practical projects

Theoretical:

- Parametric inversion
- Statistical analysis
- Stochastic modelling
- Spherical harmonic functions
- Digital signal processing
- Coordinate transformations/quaternion arithmetic
- Fourier analysis

Articles review:	Successfully completed the review of 8 scientific articles, cf. Publons
Computational:	• Algorithm development and implementation • Data management, analysis and visualisation • Automation, robustness, fault recovery • Problem resolution/solution discovery/hacking
Software:	Latex, MS Office, Git, SVN
Programming:	• 1996 – present: Bash • 1998 – present: Matlab • 2002 – present: Fortran • 2006 – 2008: C/C++ • 2011 – present: Ruby • 2015 – present: Python
OSs:	OSX, MS Windows, Unix/Linux

Fields of Interest

Space geodesy

Earth System Science

Mathematical Modelling

Digital signal processing

Numerical Simulation

Big data

Rocket Motion and Orbital Mechanics

System Analysis and Design

Aerodynamics

Structural Mechanics

Collaborations

2017 – present	Collaboration with Dr. Guillaume Ramillien from Centre National de la Recherche Scientifique (CNRS) and Dr. Aleš Bezděk the Astronomical Institute (ASU) of the Czech Academy of Sciences (AVCR) to **drive surface mass variations directly from "reduced" gravimetric data** (i.e. observations "cleaned" of non-gravitational and trivial gravitational effects).

2017 – present	Collaboration with Dr. Noble Hatten and Dr. Dae Lee of the CSR. UTexas for the **development of a CubeSat architecture that replicates the gravimetric capabilities of the GRACE satellites**.
2016 – present	International collaboration with Prof. Luis Rocha of Universidade do Minho (UMinho) and Dr. Dae Lee of the CSR, UTexas for the **development of a MEMS-based space accelerometer as a first step towards the nano-gravimetric satellite framework**.
2015 – present	International collaboration with Prof. Torsten Mayer-Gürr of the Institute of Geodesy (IfG) of the Graz University of Technology (TUG), Dr. Aleš Bezděk of the ASU of the Czech Academy of Sciences (AVCR), Prof. Adrian Jäggi of the Astronomical Institute of the University of Bern (AIUB), Prof. Pieter Visser of the Aerospace Faculty of the TU Delft and Prof. C.K. Shum of the School of Earth Science (SES) of the Ohio State University (OSU) for the **study of the time-variable gravity field of the Earth estimated from GPS data collected by the Swarm Satellite mission**. Within the scope of this project, we submitted a grant application with very positive reviews (Ref. ESA AO/1-7927/14/NL/MP), and have recently been awarded funding under the ITT posted by the ESA-funded aDISC consortium
2014 – present	Collaboration with TU Delft on the DopTrack project, consisting of a **satellite tracking radio station that exploits the Doppler effect**; co-initiated and promoted the project, secured departmental funding, selected and assembled the hardware, developed software, engaged students and mentored practical undergraduate projects.

Research Projects

2013 – 2015	Assessment of Satellite Constellations for Monitoring the Variations in Earth's Gravity Field (ESA contract 4000108663/13/NL/MV)
2013	GOCE+ Theme3: Air density and wind retrieval using GOCE data (ESA contract 400010284/11/NL/EL)
2011 – 2016	Development of the Swarm Level 2 Algorithms and Associated Level 2 Processing Facility (ESA Contract 4000102140/10/NL/JA)
2010	Assessment of a Next Generation Gravity Mission for Monitoring the Variations of Earth's Gravity Field (ESTEC contract 22643/09/NL/AF)
2008	Monitoring and Modelling Individual Sources of Mass Distribution and Transport in the Earth System by Means of Satellites (ESA contract 20403)
